

VARIUS WORLD TECH

Our Motivation

The world of online gambling is huge, it's been around since the beginning of the internet and it seems ever more markets are opening up daily. With Russia relaxing their laws on online gambling a few years ago and America legalizing gambling federally just recently, there's never been a better time to be in this industry.

However, with regulation governing gambling licenses being made ever more complicated and technical costs running into the millions of dollars per year, it's not hard to see why this arena is dominated by so few companies.

The barrier to entry for this industry is one of the highest.

Also with some companies setting up specifically to allow corruption and money laundering, this pushes up the annual cost of running these sites and damages the reputation of legitimate gambling businesses.

We believe there needs to be a way for companies to enter this industry, become and stay compliant, establish & maintain trust and integrity all while having minimal setup costs and complications.

This is why we're proud to introduce Varius World Tech: the future of online.

Kind Regards,

The VWT Team

Executive Summary

Varius World Tech is a software solutions provider that aims to deliver to market a suite of tools specifically designed to make the world of online gambling more efficient, trustworthy and economical.

For almost a decade now, this revolutionary technology has been helping businesses keep track of their inventory, monitor safety levels even help navigate airport traffic control. Now we're using it to create an industry specific set of software tools tailor made for online gambling businesses that will be more efficient and have trust and integrity built into its very core.

Never before has it been so simple and cost effective to setup your very own online casino. Using our patent pending casino hosting platform we provide the integrity of the Distributed Ledger Technology (DLT), at the speeds required for online gambling at a fraction of the cost of the existing software providers.

In Q2 of 2019 we will introduce the Varius Online eXchange token, a utility token that will be accepted as payment at all of the casinos in the VWT network both land based and online.

We will be pre-selling these tokens raise capital for the development our software suit, privately from August 2018 and we will make them available to the public from October 2018.

The Online Gambling Industry

From 2017, the online gambling industry contributed \$6.45 billion to the gross gambling yield of the UK casino industry.

The abundance of customisable games, 24 hour accessibility and flexible pricing format ensures a convenient experience for the user that supersedes the limitations of traditional casinos. Costs accumulated by the customer travelling back and forth, or overheads of running a land based casino can be dramatically reduced through the alternative use of online casinos. As a result, online gaming platforms constitute the dominant contribution in the overall UK market (35.2%).

The gross gambling yield of non-remote betting has decreased by \$122 million dollars in the UK market as the online sector continues to expand. The expected worldwide growth according to latest statistics, is a rise from \$465 billion to \$495 billion by 2019.

The benefit of engaging in gambling play from the comfort of the customers home increases conversion probability from casual players into repeat customers, making casino play a recurring engaging hobby. Latest statistics from the Gambling Commission have stated that 25% of people have gambled online within the last four weeks. Patterns of gaming behaviour and trends can be regulated both for commercial benefit and regulatory purposes. It also allows for games to be innovated and adapted at a faster pace, providing greater efficiency and further reaching demographic

The Online Gambling Industry >

The integration of blockchain technology into the online gambling space ensures customers money is secured through the process of placing a bet, and continually protected through a fair and transparent system when odds and results are made. Lower fees and faster deposit times improve the cost-efficiency and subsequent profit margins for casino sites. <http://www.bmmagazine.co.uk/in-business/how-the-blockchain-is-transforming-online-gambling-as-we-know-it/>

Lack of transparency from online casinos can be a deterrent for potential new customers who are unsure if the site complies to rules they say they are. The blockchain ledger system ensures a record of transactions that cannot be changed or erased. The result is a transparent, honest system that can be verified by both the site and customer. Rules proposed by each game on the blockchain casino website are also featured on the smart contract, therefore they can be verified and are always fair. The additional benefit of transparency for online casinos is that who are under strict regulation. This is not to say there will not be legislation in the future, however it will more likely be in terms of social responsibility requirements and prevention of money laundering in comparison to the heavy monitoring and regulation that is currently in place.
